Table of Contents

Table of Contents	1
List of Figures	3
List of Tables	4
List of Abbreviations	4
Acknowledgement	5
Abstract	6
Chapter 1 INTRODUCTION	7
1.1 Background & Motivation.....	7
1.2 Brief Introduction of Siemens Gamesa Renewable Energy.....	8
1.3 Objectives & Problem Definition.....	9
1.3.1 Increasing the Procurement Process Efficiency	10
1.3.2 Facilitating the Procurement Daily Tasks	11
1.3.3 Developing Internal Database to avoid from customization cost of ERP	11
1.4 Research Methodology.....	12
1.4.1 Research Model.....	12
1.4.2 Data Collection Methods	12
1.5 Outline of the Thesis	14
Chapter 2 LITERATURE SURVEY: PROCUREMENT PROCESS MANAGEMENT	15
2.1 Basic Terms	16
2.1.1 Process & Business Processes	16
2.1.2 Efficiency & Effectiveness of Business Processes.....	18
2.1.3 Business Process Management.....	19
2.2 General Overview of Procurement Function in SCM and Definitions	21
2.3 Procurement Process Cycle	25
2.4 Procurement Methods & Strategies.....	28
2.5 Strategic Procurement and Negotiation Concept.....	29
2.6 Procurement Efficiency.....	31
Chapter 3 LITERATURE SURVEY: DATABASE MANAGEMENT SYSTEMS	35
3.1 General Overview of Database Management Systems	36
3.2 ERP Systems	40
3.2.1 ERP Definition & History of development.....	40
3.2.2 Challenges during ERP implementation phases in the organizations	41
3.2.3 ERP role on procurement function.....	44
3.2.4 Inadequacies of ERP Systems.....	48
3.3 Additional Database Management Systems Besides ERP.....	51

3.3.1	Reasons Of Using Additional Database Systems To Common ERP Systems .	51
3.3.2	Challenges of Multiple DBMS Usage	53
3.3.3	Database System Design.....	55
3.4	Database Management Systems & IT systems in Procurement.....	57
Chapter 4	ANALYSIS	58
4.1	Brief Explanation about Specific Terms related to Siemens Gamesa Organization.	59
4.2	AS IS: Analysis of Current Procurement Process In Siemens Gamesa Renewable Energy	64
4.2.1	Procurement Function in Entire Organization in Siemens Gamesa	64
4.2.2	Process Flow for Procurement Task Cycle	66
4.2.3	Database Management Systems Utilization and RFQ Preparation Flow	70
4.2.4	Challenges & Requirements in the implementation of New System	73
4.3	TO BE: Proposed Solution through Development Of a New Database Model	74
4.3.1	New RFQ Database Flow	74
4.3.2	Identification of Business Requirements for conceptual database design	74
4.3.3	Logical Database Design for RFQ process	79
4.3.4	Physical Database Design with complete structure of RFQ Database	80
4.4	Comparison of AS-IS with TO-BE Model and Self Assessment of the Solution.....	81
Chapter 5	CONCLUSION	85
5.1	Review of Research Objectives.....	85
5.2	Project Assessment.....	86
5.3	Further Work.....	88
Appendices		90
Bibliography.....		101
Ending statement of authorship.....		105

List of Abbreviations

DBMS: Database Management system
ECN: Engineering Change Management
ERD: Entity Relationships Diagram
ERP: Enterprise Resource Planning
IT: Information Technology
KPI: Key Performance Indicator
RDBMS: Relational Database Management System
RFI: Request for Information
RFP: Request for Proposal
RFQ: Request for Quotation
SCM: Supply Chain Management
SRM: Supplier Relationships Management

Acknowledgement

I would like to express my appreciation to my supervisors Tomasz Sekunda and Prof. Dr. Thomas Rachfall for their great support with their experience, knowledge, advices and guidance throughout this challenging thesis period. Their practical and academics experience was very helpful to overcome the challenges.

I would like to thank to Antti Kapanen, research associate at HTW Berlin, for his support for my quick questions.

I would like to thank to Uğur Eliiyi, assistant professor of 9 Eylül University, for his advices

I also would like to owe my greatest gratitude to my father and mother who are always mentally support me with their positivity showing their trust to me.

Abstract

This paper proposes the master thesis topic which is titled as “Effects of Database Management Systems on Procurement Efficiency”. This topic analyzes and focuses on the database management systems in terms of their usage for the procurement processes and how they affect the procurement process. It is mainly aimed to search relevancy between database management systems and procurement efficiency proposing a solution with new database system design for the RFQ (Request For Quotation) process. RFQ process is analyzed by revealing each distinct input and output on the process chart to realize the existing steps and requirements to establish a new database design. Thesis starts with the literature survey and theoretical background of two major topics: “Procurement Process Management” and “Database Management Systems”. Afterwards, it continues with “AS-IS” and “TO-BE” analysis of Siemens Gamesa with respect to its procurement process cycle and efficiency. Based on analysis chapter, study focuses on how this database management systems which include ERP and others (company-specific) are used in the procurement processes. Procurement efficiency criteria used in procurement environment were considered and clarified through the support of literature in order to make an efficiency comparison between “AS-IS” and “TO-BE” models. At the same time, necessity of other database management systems except for common ERP systems are discussed considering the reasons of looking for new database implementation purposes involve the internal database developments. Their pros and cons are discussed. For that purpose, inputs and data collections from Siemens Gamesa organization were used to support the aim and scope of the thesis.
